

# TRINITY

— RETAINING WALL —

TRINITY  
Buff - Special Color

TRINITY  
Mojave Dawn

The Trinity Segmental Retaining Wall (SRW) system is designed to meet both NCMA and AASHTO design standards for segmental walls and mechanically stabilized earth (MSE) structures. Trinity blocks are the result of years of research and testing to develop the most versatile eight-inch unit available to the SRW industry. Trinity can be installed with a frictional geogrid connection, a mechanical geogrid, or direct anchorage with proper design and engineering.
